

Environmental and quality policy

Unitrafo Electric AB

Unitrafo markets a wide range of transformers and power quality products. What all our products have in common is that they promote a good electrical environment and high power quality. Our goal is also to continuously market products that support these values. We collaborate with several leading European manufacturers, and our business area covers the Swedish and Northern European markets.

Our greatest environmental impact comes from the use, manufacturing, and transportation of our products. Therefore, within the framework of what is technically possible and economically reasonable, we aim to limit the environmental impact of our products, protect the environment, and prevent pollution.

We will market our products and services in a way that leads to satisfied customers and stakeholders. This will be achieved through reliable and efficient goals and procedures that are continuously updated and through the ongoing improvement of our management system. We will meet customer requirements within the framework of what is technically possible, appropriate, and economically reasonable.

We will operate in accordance with applicable legislation and other relevant requirements, both regionally and internationally.

We will continuously evaluate our operations with the goal of minimizing environmental impact.

This quality and environmental policy applies to Unitrafo Electric AB.
